PROFILE

Gameplay programmer working in C++ with Unreal Engine and C# with Unity. I build the systems a team builds on (projectiles, time rewind, progression, saves) and make them data-driven, so designers can tune them without waiting on code. Studying Advanced Gameplay Programming at Futuregames, after a B.Sc. in Computer Game Development.

SKILLS

Programming	C++, C#, Python
Engines	Unreal Engine 5 (C++, Blueprint), Unity (C#, editor tooling)
Also	Git, Unreal Python scripting, object pooling, debugging, technical writing
Languages	Swedish (native), English (fluent, C2)

GAME PROJECTS

Time to Breach — Time rewind system 2025

Unreal Engine 5 · C++, Python · team of 8 · 4 weeks

- Built a reusable rewind component: 30 Hz snapshots in a fixed-size ring buffer (10 s of history in about 60 KB), played back with interpolation while enemies keep fighting.
- Added an undo timeline for discrete state: systems record a closure that reverses their change; health uses it to give back damage taken.
- Wrote an Unreal Python tool that batch-creates reversed copies of every animation and montage in a folder.

Thrall — Projectile system 2024

Unreal Engine 5 · C++ · team of 13 · 7 weeks

- Designed a data-driven projectile system (launcher component, projectile actor, swappable hit effects); designers made new projectiles in Blueprint without C++ changes.
- One launcher for player and AI; possessing an enemy swaps in a stronger player version of its projectile.
- Round-robin object pools: nothing spawns mid-fight, and spent bolts stay stuck in walls until reused.

Scapegoat — Save & progression systems 2024

Unity · C# · team of 14 · 4 weeks

- Built a skill tree on ScriptableObjects, with a custom editor window for laying out skills and prerequisites.
- Built an interface-based save system (JSON, optional obfuscation); another programmer added portal unlocks without touching the core.

Voxel Generator — Solo tool 2023

Unity · C# · solo · 4–6 weeks

- Chunked voxel meshing with face culling across chunk borders, fed by Perlin noise, height maps or a model voxelizer that uses a reverse 3D flood fill to make models solid. Results export as prefabs.

EDUCATION

Futuregames, Stockholm — Advanced Gameplay Programming 2024 – present

Stockholm University — B.Sc. Computer Game Development 2020 – 2023

Lund University — Information Systems Design 2017 – 2019

Danderyds gymnasium — Mathematics specialisation, with the Mittag-Leffler Institute 2012 – 2015

OTHER EXPERIENCE

Skeppsbro Bageri — Café service associate, running a mobile café day to day 2020 – present

Malmö Harbor — Car driver, vehicle logistics under tight safety and time constraints 2019 – 2020

Wildlife rescue, South Africa — Volunteer: animal care and construction in an international team 2016
